

“EQUIPPED TO MEET YOUR NEEDS”

High Pressure Fog System

The High Pressure Fog System is the most efficient and requested cooling system.

With operational pressures of 1000 to 1500 PSI, it atomizes water into billions of micron-sized droplets which flash evaporate upon contact with the air, for the greatest possible temperature reduction.

High Pressure Fog Systems are custom designed and installed with little or no structural modifications.

High Pressure Fog Systems are used worldwide in environmental applications that require cooling, humidity control, dust control and odor control.
