

“EQUIPPED TO MEET YOUR NEEDS”

Heaters for Poultry Facilities

Heat-Rite VST Brooders Tube Heating

Heater Check List

Now that fall is here, it is time to check out your box heaters in the barn. Here are a few things to do before the cold weather arrives.

- Clean heaters with high pressure air to remove as much dust and dirt as possible. (remember to clean out the blower wheel particularly well)
- Check all pipe connections from the ceiling to the burner, with soapy water, for any small gas leaks.
- Check for any broken wire connectors for high temperature switches, air proving switch etc. Replace if necessary.
- Manually check that the heater is turning on and off with the control.
- Check that both male and female plug ends at heater are in good condition.
- Light pilot light and start heater up. (if heater is not electronically lit)

Radiant tube heating offers a convenient and effective alternative to standard brooders. Ceiling mounting provides wide even coverage in the barn.

The infra-red process heats objects rather than wasting heat on the air allowing VST to efficiently warm the floor and chicks.

Diagnostic capability incorporated into the burner design.

Flexible design options, a broad range of burner sizes and tube lengths, and are available for natural gas or liquid propane styles available.

“EQUIPPED TO MEET YOUR NEEDS”

PSI

With its unique low profile design, quality components and flexible configuration options, PSI Horizon forced air heaters combine economical highly reliable performance with the most space-efficient design available to meet the need of a wide range of poultry facilities.

Available in 4 sizes, 40,000, 60,000, 150,000 and 225,000 Btu/h, with pilot light or electronic ignition, a stainless steel cabinet and for liquid propane or natural gas. All models have variable heat outputs.

L.B. White

With over 40 years in poultry confinement heating, L.B. White's Classic and Guardian forced air heaters are proven performers.

They offer an efficient direct-fired design combined with a range of heat outputs, ignition configurations and installation options. All delivered with a commitment to service that's second to none. A dependable and economical heat source.

Reliable, low maintenance design, with pilot light or hot surface ignition in a painted steel cabinet and available for liquid propane or natural gas. Hot surface ignition models come with advanced service-saver monitoring.

Purafire

These heavy-duty heaters provide a consistent, clean-burning and fuel efficient source of heat for any type of confinement installation. With near 100% efficiency, these heaters use less energy to yield greater BTUs.

Choose from two models:

C80– Variable output (40,000 to 80,000 BTUH)

C225– 225,000 BTUH

Each heater has a stainless steel outer cabinet with electronic ignition and is available for liquid propane or natural gas.
